Conference Technique

Divide the students into groups of 4-6 students. Select topics such as Use of Teaching Aids" and have students individually list the advantages and disadvantages of each "Teaching Aid". After two (2) minutes have students reassemble as a group and compile a group list of advantages and disadvantages. After five (5) to eight (8) minutes have group spokesperson present the groups master list of advantages and disadvantages.

Group Discussion Techniques

Divide the students into groups of 4-6 students each. Give the students a problem statement and have them develop a solution. After 10 minutes of discussion have the group spokesperson present their solution and describe the process by which the solution was developed.

Problem Statement

Student X is a volunteer firefighter who is a problem learner in that he is receiving low scores on annual manipulative proficiency tests and also disrupts other volunteer firefighters who are trying to master the manipulative skills necessary to do well on the annual tests.

As an instructor how should you deal with student X.

Group Solution

Process used to reach the solution:
